

BOOMLOOP™

Fully integrated recirculation system

Paired with RightSpot®, BoomLoop creates a streamlined path for product to flow to each nozzle and back to the tank.

Sequenced priming

Automated priming saves time and ensures the boom is effectively primed and ready to spray without waste or risk of spraying product on the ground.

Convenient flushing

Automatically eliminate deadspots and opportunities for chemical buildup through flushing product or water back to the tank.

Visibility through InCommand® display

View and control recirculation from the same interface used to steer, apply, and more.

Controlled on the InCommand® Go 16

BoomLoop is an upgrade for sprayers equipped with the RightSpot nozzle-by-nozzle control system. BoomLoop is an automated recirculation system that provides sprayer operators a simple and effective way to prime, flush, and reagituate boom contents while creating cleaner booms. This solution empowers the user to immediately begin applying without waste or the risk of crop damage and untreated area.
